Period for Reply		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Van Erp in view of McMickle et al. Van Erp discloses the invention substantially as claimed including more than 6 insulated leads wrapped in parallel helices, apparently of the claimed pitch, however the pitch is not per se disclosed. McMickle et al. teach that changing the pitch to alter flexibility is notorious in the art. As such, merely altering the pitch of the Van Erp leads would have amounted to an obvious design choice in order to effect a desired flexibility.

Applicant argues with respect to the combination of references, that in the prior art it is generally necessary to wind the wires with a fairly tight pitch, to lend greater flexibility and wear resistance to a cable that must withstand the flexure caused by the constant beating of the heart and that all of the prior art of cardiac implant cables, including McMickle, teach away from the present invention's a loose pitch.

This argument is not found to be persuasive. First, a combination of references can be appropriate even though not combined for the same reason as Applicant's, as is the case here. Given the structure currently claimed and given the teachings of both Van Erp and McMickle, one skilled in the art would have been motivated to alter the pitch of Van Erp in order to modify the lead's flexibility. Even a minute adjustment in this regard would render the claimed structure as the Van Erp lead is clearly already close to the claimed 45 degree pitch called for in Claim 1. Furthermore, to extrapolate

this principle to and even beyond 30 degrees as in Claim 2 would certainly be reasonable since extreme bending radii are often required for leads used in the human vasculature. As such, this rejection remains FINAL.

Conclusion

This is an RCE of applicant's earlier Application No. 10/043,972. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
